Read Me File

This is a replication of the paper *Impact of a local, coastal community-based management regime when defining marine protected areas: Empirical results from a study in Okinawa, Japan* and includes data received directly from the authors on September 8th, 2026. The files run automatically if processed in R, assuming user places both the qmd and data file in the same folder. A full run takes approximately 20 minutes given an average processing speed. This replication was performed in R studio.

Files:

Data: Data file containing all data required for replication

DataDictionary: Dictionary describing all data columns

Output: All tables produced using the runall

RUNALL: replication code in full

Required R Packages:

Mlogit

Dfidx

KableExtra

Knitr

Tidyr

Dplyr

Readxl
